Vermont Travel Notes

A blog with news, advice, and tips for touring Vermont.

Leave the sandwich bags for sandwiches - this is a true leak-less solution.

The Transportation Security Administration (TSA) airplane carry-on regulations on liquids, gels, and aerosols mandate that carry-on bags are limited to a maximum of three ounce liquid containers, that they be in a clear bag of a maximum of one quart capacity, and a limit of one bag per person. It's known simply as the 3-1-1 rule.

Here is a practical solution from a company called [3-1-1 Travel Bag](#)

The **clear bag system** Original, \$24.95:
Four (4) medium (1.0 oz) pumps
One (1) mini (.50 oz) pump

The **clear bag system** Fashion, \$34.95:
Two (2) large (1.75 oz) pumps
Two (2) medium pumps
Two (2) mini pumps

The **clear bag system** Fashion Elite, \$44.95:
One (1) large pump
Two (2) medium pumps
Two (2) mini pumps
Two (2) small (.50 oz) jars

All the containers are reusable and additional jars and pumps are available in an assortment of sizes starting at \$4.00.

The 6-X-8-inch clear cases meet the TSA carry-on regulations and the pumps are non-aerosol, airless pumps as specified in those regulations. Each bag has some extra room for toothpaste and deodorant. These bags are a ideal solution for carrying liquids in your checked luggage too.

Keep all those friendly folks at the X-ray machines happy (and fellow passengers too). You could buy small containers of your favorite brands but that gets expensive if you can even find them in those sizes. And, trust me, I know from personal experience that sandwich bags are not dependable.

You can purchase online at the [clear bag system website](#).
